

User Manual

Login with your credentials.

Select the laboratory you would like to access.

Press “Initialise Lab” to create the laboratory session.

Press “Boot machines” to start your session. The laboratory will take a couple seconds to boot up.

You can now access and work on your laboratory activity. Information about your laboratory is displayed as well as the desktop screens that you can interface with. Above each screen is a link to access the desktop environment in a separate browser window/tab.

If the networking of your desktop environments has been properly configured, their IPv4 addresses are shown. If you leave the laboratory page your desktop environments will shut down after a period of time.

You can shut down your machines by pressing “Stop lab”. This will put your machines into an “Off” state. Please ensure to save your work before you press this.

Once your laboratory activity is complete and no longer needed, or you would like to start fresh. You can wipe the lab by pressing “Stop lab” and then “Wipe lab”. This will clear all the progress you have made with the current lab.

To access another laboratory activity, you need to ensure any other lab sessions are shut down by pressing “Stop lab”.
