

Admin Manual

Main page / Virtual networks

Here you can view all the defined domains and networks. Information is shown as well as a few options to stop and view the XML information of the domain.

Users

Here you can view users, add users or change the password for a user. When adding a user, the username must be unique.

Laboratories

This page allows you to view laboratories as well as adding them:

VM Count: The number of desktop environments the laboratory will use.

Lab name: The name of the laboratory (required but does not have to be unique)

Select Operating Systems: The operating systems that will be used for each virtual desktop instance.

Additional Lab info: Optional, allows you to provide additional information about the laboratory, for example, a lab script or steps to complete the activity etc.

Operating Systems

This page shows all the installed operating systems as well as their file paths.

To install or remove an operating system, simply delete or add the .qcow2 image to the directory defined in settings.php (\$base_image_location).
